

OurNative

Village Community App

Preserve Roots. Rebuild Bonds.

Memories • People • Values — Together Again

Heritage

Preserve golden era memories
1970–2000

Unity

Rebuild broken
community bonds

Wisdom

Capture elders'
knowledge forever

Real Help

Blood, jobs, funerals
& genuine support

Extensive Product Blueprint | Flutter + Supabase | Android-First | Marathi-First
Version 1.0 | May 2025

TABLE OF CONTENTS

13	Launch Strategy	How to go from 0 to first village
14	The Golden Rule	One principle to guide every decision

01 VISION & MISSION

The soul and purpose of OurNative

What OurNative Is

OurNative is NOT another social media platform. It is a **digital village square** — a peaceful, warm, and human space where community members preserve golden memories, rebuild broken bonds, respect elders, and help one another through real challenges. It exists in a completely different category from Facebook, WhatsApp groups, or Instagram.

CORE MISSION

OurNative is rebuilding trust, identity, emotional connection, inter-family respect, shared memories, and community unity — at a time when people are digitally connected but emotionally disconnected.

The Vision Statement

"A digital home for our village — where memories unite generations."

What the App Should Make Users Feel

- "I belong to this village."
- "These are my people."
- "We may disagree politically, but we still attend each other's weddings, festivals, and funerals."
- "My children will know where they come from."
- "This elder's wisdom must not be lost."

What OurNative Is NOT

✗ What It Is NOT

- A political debate platform
- A Facebook or Instagram clone
- A viral content machine
- An engagement-addiction product
- A WhatsApp group replacement
- A revenue-first startup

✓ What It IS

- A Digital Heritage Platform
- An Emotional Belonging Product
- A Community Memory Archive
- A Real Human Help Network
- A Slow Social Platform
- A Mission-Driven Cultural App

02 PROBLEM STATEMENT

Why this app is needed now

The Golden Era That Was Lost

Between 1970 and 2000, village communities in Maharashtra and across India shared a richness of human connection that is rapidly disappearing. People attended each other's weddings, helped in funerals, shared farming knowledge, and gathered at festivals without political filters. Relations were deep, values were shared, and the community was one organism.

What Changed After Rapid Tech Growth

- Politics entered the village digital space — primarily via WhatsApp and Facebook
- People divided into groups along party lines, losing the ability to speak across differences
- Selfishness and money-motivation replaced community spirit
- Each group believes only their perspective is correct
- Relations between old friends and families broke under political pressure
- Elders' wisdom, stories, and memories are dying with them — undocumented
- Youth disconnected from local identity, village history, and ancestral stories
- Migrated villagers in Mumbai, Pune, Dubai lost touch with roots
- The 1970–2000 golden era of photographs, traditions, and community is being lost forever

GLOBAL RELEVANCE

This problem is not limited to one village. It is becoming global. People everywhere are digitally hyper-connected but emotionally and culturally disconnected. OurNative addresses this at the village community level first.

The Library That Is Disappearing

Every elder who passes away takes with them an irreplaceable library — of stories, farming methods, conflict resolution wisdom, village history, traditional songs, old rituals, and migration journeys. There is currently no structured way to preserve this. **OurNative's 'Before It Disappears'** feature is the most emotionally powerful response to this crisis.

03 TARGET AUDIENCE

Who will use OurNative

Village Residents

PRIMARY

- Currently living in the native village
- Need a positive space beyond divisive WhatsApp groups
- Want to share daily life, achievements, and help

Migrated Villagers

PRIMARY

- Living in Mumbai, Pune, Gulf, or abroad
- Emotionally disconnected from roots — deeply nostalgic
- Will be the most active users of the memories archive

Elders (60+ Age)

CRITICAL

- Carry irreplaceable stories, wisdom, and village history
- Prefer voice/audio over typing
- Need large fonts, simple navigation, Marathi-first UI
- "Before It Disappears" section is built specifically for them

Youth (15–30 Age)

IMPORTANT

- Students and young professionals
- Have lost connection to local identity and heritage
- Will discover roots through old photos and stories
- Bridge between elders and future generations

Community Admins / Trusted Leaders

FUNCTIONAL

- Teachers, village leaders, respected neutral figures
- Responsible for moderation and community tone
- Can create announcements and approve posts

04 CORE PHILOSOPHY & RULES

The principles that protect the community

The 10 Principles of OurNative

These are not just community guidelines — they are product design principles. Every feature, every screen, every interaction should be filtered through these rules.

1 No Political Fights

Political content, party names, propaganda, and debates are strictly prohibited. One toxic political post can damage the entire community atmosphere permanently.

2 No Hate Speech or Caste Insults

Zero tolerance for caste-based, religious, or ethnic insults. Auto-flag system plus human moderation for these content types.

3 Respect Elders Always

Elders are treated with special status. Their wisdom section is prominent. Any disrespectful comment toward elders triggers immediate moderation.

4 Preserve Community History

Every old photo, story, and wisdom piece is a national heritage asset. The app is designed to make archiving as easy as possible.

5 Encourage Help, Gratitude, and Unity

The feed algorithm (if any) should surface help requests, achievements, and positive memories — not outrage or ego-driven content.

6 No Viral Addiction Design

No infinite scroll, no like counts, no follower metrics, no trending sections. The app should feel calm, not addictive.

7 Promote Real-World Relationships

Digital activity should lead to real-world gatherings, not replace them. Events section actively encourages offline community meetings.

8 Marathi First, Always

The emotional connection is in the mother tongue. Marathi-first UI creates instant emotional ownership.

9 Positive-Only Reaction System

Replace "Like" with Respect, Heart, Proud, Inspired, Prayers, Thank You. Never allow dislike or negative reactions.

10 Trust Before Scale

Start with one village. Build emotional trust. Scale only after the community tone is established and healthy.

Marathi Community Rules (Display Screen)

These rules should appear as a beautiful screen during onboarding:

- ■■■■■■ ■■■■ — Speak with respect
- ■■■■■■ ■■■■■■ ■■■■ — Avoid political fights

- ■■■■■■ ■■■■■■ ■■■■ — Do not spread hatred
- ■■■■■■ ■■■■ — Preserve memories
- ■■■■■■ ■■■■■■ ■■ — Come forward to help
- ■■■■■■ ■■■■■■ ■■■■ — Keep affection alive

05 APP MODULES

10 feature modules — complete specifications

Module 1 Authentication & Onboarding

Purpose: Secure, warm, invite-based entry into the community.

Core Features:

- Mobile number or email login with OTP verification
- Optional Google Sign-In
- Warm emotional 3-screen onboarding flow
- Village/community selection and join request
- Admin approval system for private communities (invite-only MVP)
- User profile: full name, surname, native village, current location, role, bio
- Roles: Member, Elder, Youth, Moderator, Admin
- Community rules acceptance screen before entry

Module 2 Home Feed

Purpose: A warm, curated stream of positive community content.

Core Features:

- Feed types: Memory, Story, Vintage Photo, Elder Wisdom, Help Request, Achievement, Festival, Condolence, Event
- Positive-only reactions: Respect, Heart, Beautiful Memory, Inspired, Proud, Prayers, Thank You
- No like-count display — reactions are private qualitative signals
- Comment system: respectful placeholder text, admin can disable per post
- No infinite scroll — paginated feed with natural stop points
- "Today in Our Community" section at top
- "Golden Memory of the Day" — featured vintage post
- All posts require approval before appearing (moderation queue)

Module 3 Memories Archive

Purpose: The heart of OurNative — preserving the 1970–2000 golden era.

Core Features:

- Upload old photographs with year, location, and people names
- Categories: School Days, Farming, Festivals, Weddings, Village Roads, Old Houses, Temples, Sports, Local Shops, Family
- Story caption behind each photo
- "Then vs Now" feature — side-by-side comparison posts
- "■■■■■ ■■■■" — Daily Memory section for habit-forming engagement
- Search by year, category, person name, location
- "Save to Heritage Archive" action on any memory post
- Geo-tagging of old locations on village map (Phase 2)

Module 4 Stories

Purpose: Long-form narrative space for meaningful storytelling.

Core Features:

- Story types: Childhood, Village Legends, Family, Struggle, Migration, Festival, Moral, Inspirational
- Rich format: Title, Cover Image, Story Body, Audio Narration option
- Tags, year/period, author attribution
- Audio story recording — critical for elders who cannot type
- "■■■■■■■■ ■■■ ■■■ ■■■ ■■■" — voice-first story capture
- Stories appear in dedicated section and on feed
- Moderation required before publishing

Module 5 Before It Disappears (Elders Speak)

Purpose: Capture irreplaceable wisdom before it is lost forever.

Core Features:

- Elder records short video, audio, or text wisdom
- Topics: Life Advice, Farming Wisdom, Conflict Resolution, Marriage Values, Village History, Old Traditions, Migration Stories
- Elder profile: name, age (optional), photo, village
- "Save to Heritage Archive" — permanent preservation
- Plays in dedicated "Before It Disappears" section
- Transcript generation (Phase 2 via AI)
- Special Elder badge displayed on all contributions
- Most emotionally powerful feature — must be prominent on home screen

Module 6 Community Help

Purpose: A real support system that creates genuine human value.

Core Features:

- Help types: Blood Needed, Hospital Help, Education/Scholarship, Job Referral, Emergency, Funeral Support, Lost Document, Volunteer Needed, Financial Support
- Fields: Title, Description, Urgency level, Contact person, Phone/email
- Status: Open, In Progress, Help Received, Closed
- Sensitive posts require admin approval before publishing
- Push notifications to community for urgent requests
- "Help Received" confirmation builds community trust
- No monetization — purely human value creation

Module 7 Events

Purpose: Bring the digital community back into real-world relationships.

Core Features:

- Event types: Village Gathering, Festival, Sports, Blood Donation, Cleanliness Drive, Tree Plantation, Education Program, Senior Citizen Meet, Cultural Event
- RSVP system: Going, Interested, Cannot Attend
- Event organizer profile
- Push reminder notifications
- Post-event photo/story sharing
- "Recurring Yearly Gathering" feature for annual events
- Events should always encourage offline real-world attendance

Module 8 Announcements

Purpose: Official, neutral community communications from trusted admins.

Core Features:

- Only admins and moderators can post
- Types: Water Supply, School Programs, Health Camps, Community Meetings, Road/Infrastructure, Village Development
- Pinned announcements appear at top of home feed
- Push notification to all community members
- Archived announcement history

Module 9

Achievements

Purpose: Celebrate community members without ego competition.

Core Features:

- Types: Academic Success, New Job, Business Milestone, Sports Achievement, Social Work, Elder Honor, Artist Recognition
- Tone: Humble, positive, inspiring — never boastful
- Community reactions: Proud, Inspired, Blessings
- No follower count or popularity metrics tied to achievements
- Elder Honors are given special visual prominence

Module 10

Family Roots (Phase 2)

Purpose: Reconnect families and generations across time.

Core Features:

- Surname directory with family introductions
- Ancestor name recording
- Old house / area name mapping
- Family photo collections
- Relation notes: "Your grandfather and mine were friends"
- Strong privacy controls — not publicly searchable without consent
- Phase 2 feature — do not build in MVP
- Will become the most emotionally bonding feature once launched

06 UI / UX DIRECTION

Visual language, palette, and typography

The Visual Feeling

DESIGN DIRECTIVE

Warm. Nostalgic. Peaceful. Human. The app should feel like an old Balbharati textbook — earthy, familiar, trustworthy. NOT a corporate startup product. NOT Facebook.

Color Palette

Color	Hex	Usage
Deep Earthy Green	#2D5016	Primary CTAs, section headers, elder content
Warm Brown	#6B3F1F	App brand, navigation bar, important buttons
Saffron / Gold	#C8860A / #D4A836	Accents, highlights, elder wisdom badges
Terracotta	#B85C38	Alerts, help requests, urgency indicators
Warm Ivory	#FAF6EF	App background — the canvas
Warm Beige / Tan	#EDE4D3	Card backgrounds, alternating rows
Soft Maroon	#7B1F2A	Condolences, serious help requests
Muted Forest Green	#4A6741	Achievements, positive community content

Typography Strategy

Typography is split into two clear tiers: Brand/Heritage fonts for emotional moments, and Readable UI fonts for usability. Mixing both creates the premium-soulful feel.

Font	Tier	Usage	Feel
Fraunces	Brand	App title, onboarding headers, quote sections	Vintage editorial, timeless, rooted
Cormorant Garamond	Heritage	Memory titles, elders speak section	Old meaningful book, emotional storytelling
Tiro Devanagari Marathi	Marathi Brand	Marathi onboarding headers, quote cards, memory titles	Literary, heritage, book-like, traditional
Mukta	Marathi UI	All Marathi body text, buttons, feed, stories	Beautiful Devanagari, warm, readable, Android-perfect
Inter / Nunito Sans	UI Body	English feed content, buttons, forms, comments	Clean, readable, calm, modern-human
Kalam	Accent	Elder wisdom quotes, memory captions only	Handwritten but readable, human touch

Navigation Structure

Bottom navigation (5 tabs) — primary access to core features:

- Home — Feed — memories, help, events, achievements
- Memories — Vintage photo archive + Then vs Now
- Help — Community help requests
- Events — Real-world gatherings and festivals
- Profile — Personal profile + My posts

Secondary sections accessible via menu/drawer:

- Stories
- Elders Speak / Before It Disappears
- Announcements
- Achievements
- Family Roots (Phase 2)

Elder-Friendly UX Rules

- Minimum font size 16sp for all body text
- Large tap targets — minimum 48dp for all interactive elements
- Voice note recording available on every post type
- Simple, flat navigation — no complex drawer hierarchies
- High contrast text on warm backgrounds
- Marathi as default language with English toggle
- Audio playback controls are large and clearly visible
- Confirmation dialogs before destructive actions
- Onboarding wizard with family member setup assistance option

Design Anti-Patterns to Avoid

- ✗ Corporate SaaS / startup aesthetic
- ✗ Dark mode as default (use warm ivory)
- ✗ Glassmorphism, neon gradients, sharp edges
- ✗ Infinite scroll without natural stopping points
- ✗ Like/follower counts visible publicly
- ✗ Cluttered card designs with too many actions
- ✗ Lobster / Pacifico / Dancing Script fonts
- ✗ Trending / Popular / Viral sections
- ✗ Red notification badges designed for anxiety

07 DATABASE ARCHITECTURE

Supabase / PostgreSQL complete schema

Database Design Principles

The database is built on Supabase (PostgreSQL). All tables use UUID primary keys, Row-Level Security (RLS) for access control, and timestamp columns for audit trails. Content moderation status is tracked at the post level, not the storage level.

communities		
id	uuid (PK)	Primary key
name	text NOT NULL	Community/village name
location	text	Geographic location
description	text	Community description
logo_url	text	Storage URL for logo
is_private	boolean	Invite-only communities
created_by	uuid (FK)	Admin who created
created_at	timestampz	Auto-generated

community_members		
id	uuid (PK)	Primary key
user_id	uuid (FK)	References auth.users
community_id	uuid (FK)	References communities
full_name	text	Display name
surname	text	Family surname
native_village	text	Village of origin
current_location	text	Where they live now
profile_photo_url	text	Storage URL
role	text	member elder youth moderator admin
bio	text	Short personal intro
is_approved	boolean	Admin approval status
created_at	timestampz	Join date

posts		
id	uuid (PK)	Primary key
community_id	uuid (FK)	References communities
author_id	uuid (FK)	References community_members
post_type	text	memory story help event achievement wisdom announcement
title	text	Post title
body	text	Post content
cover_image_url	text	Primary image URL
status	text	draft pending approved rejected hidden
visibility	text	community archive private
created_at	timestampz	Creation timestamp
updated_at	timestampz	Last update

memory_metadata		
id	uuid (PK)	Primary key
post_id	uuid (FK)	References posts
approx_year	text	e.g. "1988" or "Late 1980s"
location_name	text	Village area/landmark name
people_names	text[]	Array of person names in photo
category	text	school farming festival wedding etc
is_vintage	boolean	Pre-2000 era flag

elder_wisdom		
id	uuid (PK)	Primary key
post_id	uuid (FK)	References posts
elder_name	text	Elder's full name
elder_age	integer	Age (optional)
topic	text	Wisdom topic category
audio_url	text	Storage URL for audio
video_url	text	Storage URL for video
transcript	text	Text transcription (AI Phase 2)

help_requests		
id	uuid (PK)	Primary key
post_id	uuid (FK)	References posts
help_type	text	blood hospital education job emergency funeral etc
urgency	text	low medium high critical
contact_name	text	Person to contact
contact_phone	text	Phone (encrypted)
location	text	Where help is needed
status	text	open in_progress received closed

events		
id	uuid (PK)	Primary key
community_id	uuid (FK)	References communities
title	text	Event name
description	text	Details
event_date	timestamptz	When the event occurs
location	text	Physical location
organizer_id	uuid (FK)	References community_members
status	text	upcoming ongoing completed cancelled
created_at	timestamptz	Creation timestamp

reactions		
id	uuid (PK)	Primary key
post_id	uuid (FK)	References posts
user_id	uuid (FK)	References community_members
reaction_type	text	respect heart memory inspired proud prayers thankyou
created_at	timestamptz	When reacted

comments		
id	uuid (PK)	Primary key
post_id	uuid (FK)	References posts
author_id	uuid (FK)	References community_members
body	text	Comment content
status	text	pending approved hidden
created_at	timestamptz	Creation timestamp

reports		
id	uuid (PK)	Primary key
target_type	text	post comment user
target_id	uuid	ID of reported content
reported_by	uuid (FK)	Reporter's member ID
reason	text	political hate personal_attack fake spam privacy
details	text	Additional details
status	text	pending reviewed actioned dismissed
created_at	timestampz	Report timestamp

Supabase Storage Buckets

Bucket	Access Policy	Content
profile-photos	Public read, auth-only write	User profile images
post-images	Public read (approved), auth write	Memory photos, event images
memory-archive	Public read (approved)	High-res vintage photographs
story-audio	Public read (approved), auth write	Audio narrations
elder-videos	Public read (approved), auth write	Elder wisdom recordings
event-media	Public read	Event photos and announcements

08 TECH STACK

Flutter, Supabase, and supporting tools

Recommended Technology Stack

STACK RATIONALE

This stack is chosen specifically for a solo Android-first developer with Flutter experience, a zero-budget MVP phase, and a goal of emotional quality over technical complexity.

Frontend

Flutter (Dart)	<i>Cross-platform mobile framework</i>	Android-first. Marathi/Devanagari rendering excellent. Future iOS/web with same codebase. Fast UI iteration.
Flutter Riverpod / BLoC	<i>State management</i>	Riverpod recommended for solo dev — cleaner, testable, less boilerplate than BLoC.
Go Router	<i>App routing</i>	Declarative routing for complex navigation flows including admin panel.
Cached Network Image	<i>Image loading</i>	Essential for old photos — lazy loading, caching, placeholder support.
Just Audio	<i>Audio playback</i>	For elder wisdom audio clips. Supports background play.
Record / Flutter Sound	<i>Audio recording</i>	For elder wisdom recording and voice story narration.

Backend

Supabase	<i>Complete BaaS platform</i>	Auth, PostgreSQL database, Storage, Realtime subscriptions, Edge Functions — all in one. Perfect for solo MVP.
Supabase Auth	<i>Authentication</i>	Phone OTP, email, Google OAuth. Row-Level Security ties permissions to auth.uid().
Supabase Storage	<i>Media storage</i>	6 buckets for photos, audio, video. CDN delivery. 1GB free tier sufficient for MVP.
Supabase Realtime	<i>Live updates</i>	Community help requests and announcements can push live. Low implementation cost.
Supabase Edge Functions	<i>Server-side logic</i>	Deno-based functions for: moderation triggers, push notifications, content flagging.

Tools & Services

Firebase Cloud Messaging	<i>Push notifications</i>	Free tier, Android-first, excellent for help request alerts and event reminders.
Sentry	<i>Error monitoring</i>	Free tier crash reporting. Essential for elder-users who won't report bugs verbally.
GitHub + GitHub Actions	<i>Version control / CI</i>	GitHub Copilot Pro already in use. Actions for automated builds and testing.
Google Play Console	<i>Distribution</i>	Already have developer account. Internal testing → Closed testing → Production.
Figma	<i>UI Design</i>	For mockups before coding. Community resources for warm illustration styles.

Flutter Architecture Approach

- Feature-based folder structure: lib/features/home/, lib/features/memories/, lib/features/help/
- Each feature: data layer (repository + Supabase calls), domain layer (models), presentation layer (screens + widgets)
- Shared widgets in lib/shared/widgets/ — reusable cards, buttons, avatars
- Theme in lib/core/theme/ — warm colors, typography, spacing constants
- Router in lib/core/router/ — all routes defined in one place
- Constants for all Supabase table names, bucket names, RLS policies
- Empty states, loading states, and error states for every list widget
- Responsive layouts using MediaQuery and LayoutBuilder

09 MODERATION SYSTEM

Protecting the community tone — the most critical system

Why Moderation Is Everything

CRITICAL WARNING

One toxic political fight can permanently damage the community atmosphere. Without strong moderation, this app becomes another WhatsApp group disaster in 3 months. Moderation is not a feature — it is the product.

Content Lifecycle

Draft	User is composing the post — not yet submitted
Pending Review	Submitted — awaiting moderator approval
Approved	Visible on community feed
Rejected	Declined — author notified with reason
Hidden	Was approved but later flagged/hidden by moderator
Reported	In review queue after community report

Auto-Flag Keywords

The system auto-flags (NOT auto-deletes) posts containing certain keywords. Flagged posts are sent to moderator review queue instead of publishing directly. Categories of auto-flag content:

- Political party names (all parties, all languages)
- Abusive words in Marathi, Hindi, and English
- Caste-related insults or references in derogatory context
- Religious slurs or community-targeting language
- Personal accusations and public shaming language
- Inflammatory keywords identified by community moderators

Report Reasons

Community members can report any post or comment for the following reasons:

Political Content — Party promotion, propaganda, political debate

Hate Speech — Caste, religious, ethnic, or community attacks

Personal Attack — Naming or shaming a specific person

Fake Information — False claims about events, people, or history

Privacy Issue — Sharing someone's private information without consent

Spam — Repeated irrelevant or commercial content

Elder Disrespect — Disrespectful toward elders or their wisdom

Moderator Actions

- Approve pending post
- Reject with reason (author receives notification)
- Hide approved post (with reason)
- Warn user with official community rules reminder
- Temporary 7-day posting restriction
- Escalate to admin for permanent action
- Disable comments on specific post
- Pin/unpin important announcements

UX Moderation Detail: Comment Placeholder

SMALL DETAIL, HUGE IMPACT

Change comment input placeholder from 'Write a comment...' to 'Add a respectful thought...' (Marathi: '■■■■■■■■ ■■■■ ■■ ■■■■■...'). This small UX detail sets the entire tone of community interactions.

10 DEVELOPMENT ROADMAP

6-phase build plan for solo developer

Build Sequence Philosophy

Build slow. Build right. Build with soul. Each phase should feel complete before moving to the next. Never add features that don't pass the Golden Rule check. This is a 20–26 week journey for a solo developer building with purpose.

Phase	Name	Duration	Key Deliverables
1	Foundation	Weeks 1–3	Flutter setup, theme, routing, onboarding screens, login placeholder, bottom navigation, home screen with dummy data
2	Data Models	Weeks 4–5	Post, Memory, Story, Help Request, Event models; reusable card widgets; Supabase table creation with RLS policies
3	Auth & Community	Weeks 6–8	Supabase Auth (OTP + Google), profile setup, community join/approval flow, admin approval panel basic version
4	Core Content	Weeks 9–13	Create post flow, image upload to storage, memory archive screens, elder wisdom posts, feed integration with real data
5	Moderation & Admin	Weeks 14–16	Moderation queue, report system, auto-flag keywords, admin panel complete, post approval workflow end-to-end
6	Polish & Launch	Weeks 17–20	Marathi UI complete, audio stories, elder-friendly improvements, push notifications, soft launch with one village

Phase 1 — Foundation Details

- Flutter project setup with feature-based architecture
- Theme file: warm colors, typography scale, spacing constants
- App routing with Go Router
- 3-screen onboarding with emotional copy and warm illustrations
- Login screen (placeholder — auth in Phase 3)
- Bottom navigation: Home, Memories, Help, Events, Profile
- Home screen with static dummy data cards
- Community rules acceptance screen
- Splash screen with OurNative logo

Phase 6 — Soft Launch Checklist

- All Marathi strings translated and reviewed by native speaker
- Elder user testing with 2–3 village elders (real-device testing)
- Admin and moderator trained on moderation queue
- Community rules agreed upon by village leaders before launch
- At least 20 vintage photos/memories pre-loaded to warm up the feed

- 3–5 elder wisdom clips recorded and uploaded
- First event created for gathering post-launch
- Google Play internal testing with selected village members
- Feedback collection process defined (WhatsApp for tech issues)
- No public launch — invite-only for first 3 months

11 MVP FEATURE LIST

Must-have, should-have, and later phases

■ MUST HAVE — MVP Core

✓ User login with phone OTP	✓ Emotional 3-screen onboarding
✓ Community rules acceptance screen	✓ Profile setup with role selection
✓ Admin approval for community join	✓ Home feed with positive post types
✓ Create Memory post with photo upload	✓ Create Story with text
✓ Elder Wisdom post (text + audio)	✓ Help Request post
✓ Events list and detail screen	✓ Positive reaction system (Respect, Prayers, etc.)
✓ Comment system with respectful placeholder	✓ Report post/comment feature
✓ Moderator approval queue (basic)	✓ Admin panel (basic — approve users, hide posts)
✓ Marathi language UI (primary)	✓ Large-font elder-friendly layout

■ SHOULD HAVE — Phase 2

✓ Audio story recording and playback	✓ "Before It Disappears" dedicated section
✓ Search memories by year and category	✓ "Then vs Now" memory post format
✓ "■■■■■ ■■■■■" daily memory feature	✓ Event RSVP system
✓ Push notifications for help requests	✓ Announcements module (admin only)
✓ Achievements module	✓ English / Marathi language toggle
✓ Elder badge on profile	✓ Post sharing within community
✓ Archive backup feature for approved content	

■ LATER — Future Vision

✓ Family Roots / surname directory	✓ Native village map with old landmarks
✓ AI transcription for elder wisdom audio	✓ Auto-moderation with ML keyword detection
✓ Multi-village / multi-community support	✓ Donation and community fund feature
✓ Web admin panel	✓ iOS version
✓ Annual heritage report generation	✓ Family tree builder
✓ Offline-first sync for low-connectivity areas	✓ Memorial page for deceased community members

12 MONETIZATION STRATEGY

Trust-first. Community-first. Revenue second.

The Monetization Philosophy

MONETIZATION RULE

Do NOT aggressively monetize. Community trust breaks fast and never returns. The first 12–18 months must be entirely free. Trust is the product. Revenue is the outcome of trust — not the goal.

Phase 1: Build Trust (0–18 months) — Free

No monetization. No ads. No premium tiers. Just serve the community.

Phase 2: Ethical Revenue Options (Post-Trust)

Community Donations	Voluntary donations from satisfied users — especially NRI and migrated members who feel deeply connected. Transparent fund usage for community development shown in-app.
Village Association Sponsorship	Local village associations, gram panchayats, and community organizations sponsor the app in exchange for premium announcements and archive storage.
Memorial Pages (Optional Premium)	A beautiful, permanent memorial page for a deceased community member — family can preserve their photos, stories, and memories with expanded storage. One-time payment.
Heritage Archive Backup	Optional premium backup service for community's entire photo/audio/video archive to physical media or cloud redundancy. Priced per community.
Local Business Directory (Carefully)	A simple, curated listing of locally-owned village-connected businesses. No intrusive ads — only opt-in listings that serve the community.

What OurNative Will NEVER Do

- ✗ Show algorithmic ads or third-party advertising
- ✗ Sell community member data to any third party
- ✗ Use engagement-addiction design for revenue
- ✗ Charge for basic community participation
- ✗ Allow sponsored political content
- ✗ Create premium content tiers that divide the community

13 LAUNCH STRATEGY

How to go from zero to first living community

The Invitation-First Approach

LAUNCH PHILOSOPHY

Do NOT launch publicly. Do NOT target downloads first. Start with ONE village. Get 50–100 emotionally connected users. Build trust. Then grow organically by reputation.

Step-by-Step Launch Plan

Step 1	Identify the Village Champion Find 1–2 respected, neutral, trusted people in the village — a teacher, a retired panchayat member, a respected elder. They will be the founding moderators.
Step 2	Pre-load the Heritage Before inviting anyone, load 20+ genuine vintage photos, 3–5 elder wisdom clips, and upcoming local events. The app must feel alive before first users arrive.
Step 3	Invite Elders First The first invites go to village elders. Their presence gives the app cultural authority. Help them record their first wisdom clips — their faces become the soul of the product.
Step 4	Invite Migrated Villagers NRI and Mumbai/Pune migrants are often the most nostalgic and emotionally engaged. They will fill the memories archive faster than anyone.
Step 5	Open to Youth Once the heritage tone is established, invite youth. Their tech literacy + the existing emotional content creates instant connection.
Step 6	First Community Event Create and promote a real-world gathering through the app. The first event where app members meet in person is the most important moment.
Step 7	Word-of-Mouth Only Let natural growth happen. "My gaon has an app" is powerful word-of-mouth. Do not advertise, do not post on Product Hunt, do not chase installs.

Success Metrics for MVP (Not Download Count)

- Elders have uploaded at least 10 wisdom clips by month 2
- 50+ vintage photos archived by month 1
- At least 3 genuine help requests fulfilled through the app

- First real-world community gathering organized via Events module
- Zero major moderation incidents (political fight, hate speech)
- At least 1 NRI or migrated member reconnects meaningfully
- Community members report feeling 'emotionally connected' to roots

14 THE GOLDEN RULE

One principle to guide every single decision

THE GOLDEN RULE

Before adding any feature, ask: Does this feature increase unity, memory, respect, or real help? If the answer is NO — do not add it. That rule alone will save this app from becoming garbage social media 2.0.

"You are not building a product. You are rebuilding the human fabric of a community."

Why OurNative Can Succeed Where Others Fail

- ★ You understand village psychology — not just technology
- ★ You have a genuine emotional motivation, not a startup exit plan
- ★ Flutter + Supabase gives you solo-developer superpowers
- ★ Android-first is correct for this demographic
- ★ Marathi-first creates emotional ownership no startup copycat can replicate
- ★ You are building for depth, not scale — and depth creates loyalty
- ★ The problem you are solving is real, urgent, and deeply personal
- ★ Most developers can code. Very few understand the soul of the product.

OurNative may not become a billion-dollar startup. It may not attract VC funding. It may not go viral. But it can become **meaningful, respected, emotionally important, historically valuable, and socially healing**. And that matters more.

Preserve • Protect • Inspire

Blueprint prepared with research, analysis, and deep respect for your vision.
